

## NOTE FROM THE EDITOR

### NOTE FROM THE EDITOR

Dear Friends, Colleagues and Otter Enthusiasts!

I am very thankful to Victor Camp who provided our community a bibliography of yet another species. This issue contains the current state of the bibliography for *Lutra lutra* and contains more than 900 references. Thank you so much for this tremendous effort Victor and I know from personal communication that this work is highly appreciated by the members of the group but also outside!

I hope that this compilation is useful in the daily work for many of you! Together with the issues for other species we start to have a set of very complete and updated extensive lists of references online.

If anybody feels like providing a bibliography for one of the missing species, I can assure publication as a special issue. Please contact me and Lesley before you start in order to be sure that no duplication of work occurs.

With regards

A handwritten signature in black ink, appearing to read "Hans-Joachim Schiel".

## BIBLIOGRAPHY

### A BIBLIOGRAPHY ON THE EURASIAN OTTER *Lutra lutra*

#### INTRODUCTION

While attempting to search for behavior publications on the Eurasian otter (*Lutra lutra*), for a comparison with the North America river otter *Lontra canadensis* and the Neotropical otter *Lontra longicaudis*, it quickly became apparent an updated bibliography on this species did not exist. Therefore, it was decided to compile this bibliography on the Eurasian otter (*Lutra lutra*). The bibliography was compiled for (1) those undergraduates and graduates searching for publications relative to a potential research project on the Eurasian otter (*Lutra lutra*), (2) for independent scientists, with an interest in the Eurasian otter, who do not have access to a library at a major university, and (3) for those scientists planning to expand their scientific investigations on the Eurasian otter.

The citations for this bibliography were acquired from numerous sources. The initial citation sources were (1) the Mercier (2007) publication “Bibliographie sur la Lutra d’Europe *Lutra lutra*” and (2) the Lafontaine, et al. (2014) publication “Bibliographie French Otter (Eurasia- Africa-America). Update April 21, 2014-Version #149. Additional citations, for the years 2014 through 2020 , were located on the internet using key words and the year of interest, e.g. “*Lutra lutra* 2014” or “otter *Lutra lutra* 2014. Throughout these internet searches an extensive amount of publications were uncovered well prior to 2014. Many of these publications filled the gaps in Mercier’s and Lafontaine’s bibliographies and greatly expanded the number of citations for inclusion in this bibliography. One of the most valuable resources used is the IUCN Otter Specialist Group Bulletin (IUCN OSGB) from 1986-2020. The citations from the volumes and the volume issues of the Otter Specialist Group Bulletin (OSGB) 1986-2020 were reviewed and these citations were included. The “Literature” section of the issues of each of the OSGB volumes was investigated and these citations are included. Publications by Otter Specialist Group, prior to 1986 were also located and included. The literature search was conducted through August 2020.

A conscious decision was made regarding inclusion of articles in this bibliography. The titles of those articles, that did not contain a direct reference to otters or did not include the scientific name or made

reference to the Eurasian or European otter, were not included. Those articles containing the common name, in the language of publication, were included. Blogs and hyperlinks, linking the reader to the article, were not included. Blogs are not scientific publications and hyperlinks are unreliable over the long-term. This author has found that internet searches using the entire content of a publication or just the title is a very dependable literature search methodology. Many citations from Lafontaine (2014) are reports to or from governmental agencies or consultants to governmental agencies and were not published in recognized scientific publications. As a result, these publications could not be confirmed through the internet. Each of these particular publications are accompanied by a parenthetical note defining the citation account content(s) that could not be confirmed, interpreted, or translated. Gaining access to these unpublished reports is left to the ingenuity of other investigators.

Many of the publications required translation. Google Translate was used for article translation. All translations are italicized and enclosed within brackets. Other citation contents appearing in italics are scientific names, within or outside of parentheses, titles of books, and the name of the scientific publication.

It is hoped this bibliography will serve as a useful resource for the future.
